Is the best way to know if a class has been created to use a static list of classes that is being synchronized? A: Have a static list of classes and you can check if it contains the class you want to know about. You can also have a list of only active objects so you can be more selective of what you check for. The problem with a list of only active objects is that you might have a class that's not even registered in the JVM, and you'll see false positives if you just check for something in the list. You might want to ensure it's the only object for that class. You can use reflection for both of those methods, but it's very slow. You probably want something a bit more efficient. You could use a HashSet to make sure you get false positives. But the best would probably be to use an existing library. You can use a LinkedHashMap, Boolean for the list of active objects. It will have more false positives than a list, but less false negatives. /* * Copyright (c) 2011, 2018, Oracle and/or its affiliates.
