Root segments from Jules Verne transgenic carrot (Daucus carota L.) transformed with a T-DNA vector containing the entire cDNA for the green fluorescent protein (GFP) under the control of the constitutively active cauliflower mosaic virus (CaMV) 35S promoter were inoculated with zoospores of the parasitic fungus Halophytophthora minima, which is an endophytic pathogen of carrot and tomato. Confirmation of endophytic colonization was obtained by fluorescence microscopy. Jules Verne transgenic carrot plants grew well following systemic endophytic colonization with a nonpathogenic strain of H. minima.Q: Populating Textboxes with multiple SQL Queries in asp.net I am new to asp.net and am trying to populate textboxes in the UI from 2 SQL Server tables (table names same as the table names in my source code). I have an asp.net control named "Calc" with the following source code: ' > ' > ' > The above 4 lines of code represent 2 textboxes. I would like to populate each of the 4 textboxes with values from a single SQL query. I have tried the following query: "SELECT num1, num2, num3 FROM [Sheet1\$] WHERE num1!= 0 AND num2!= 0 AND num3!= 0" In an SQL statement the keyword "FROM" is used to specify the database table but I'm having trouble 3ef4e8ef8d
