## Windows 7 Royale Xp Iso 44

Jul 24, 2012 Copy of Win XP PS3 ISO, CSU 27 Jul 2012 6.0.6300 - Standard.zip, 2020-03-03 20:51:54 UTC. See also Windows XP Mode References Category:Windows XP Category:Virtualization-related software for Linux1. Field of the Invention The present invention relates to an image forming apparatus for developing an electrostatic latent image formed on an image carrier and transferring and fixing the image on a recording material to obtain an image, an electro-photographic image forming apparatus and an image forming apparatus having a function of combining the use of a recording material having an image fixed thereon. 2. Related Background Art Conventionally, an image forming apparatus is known which forms an image on a recording material and performs a post-processing such as a stapling processing. Such a type of image forming apparatus has an exclusive-use conveying path for conveying the recording material having the image formed thereon and the exclusive-use conveying path is opened to the conveying path for a post-processing to perform a post-processing such as a stapling processing to the recording material having the image formed thereon. In such a conventional image forming apparatus, however, there are cases that a jam of the recording material occurs in the conveying path for the post-processing, in which the conveying path for the post-processing is formed separately from the conveying path for the recording material, and the recording material having the image formed thereon cannot be released because the jam of the recording material is left as it is. In this case, the image forming apparatus stops the conveying operation of the image forming apparatus, and the post-processing for the recording material having the image formed thereon is stopped, so that the productivity is remarkably lowered. In order to prevent such a situation, in the image forming apparatus having the function of combining the use of a recording material having an image fixed thereon and the function of performing the post-processing such as stapling processing to the recording material, it is necessary to have both of a conveying path and a fixing conveying path as a conveying path for the recording material having the image formed thereon and a conveying path for the recording material having the image fixed thereon and a conveyance thereof is complicated. In such a conventional image forming apparatus having the function of combining the use of a recording material having an image fixed
