download. As is well known,  
the ongoing proliferation of

---

the amount of data required to be processed by the average person, such as to update social networking pages, access personal information, track personal finances, or conduct other activities, has far outpaced the increase in processing capability. While the introduction of the cellular telephone has been a great boon for people desiring to be able to process data in the

---

field, there are also a number of downsides to such usage. For example, portable computing is typically limited to that which can be provided by a small electronic device, such as a cell phone. With the emergence of smart phones, even more computing power has been added, but such devices also have the same data storage and data processing limitations as a

---

cell phone. Smart phones typically have limited access to data stored on a personal computer. One feature of smart phones that may allow for such access is the use of a wireless 2d92ce491b
